Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary Examiner Andrew H. Lam 2625 The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 24 October 2006.

DETAILED ACTION

 This action is responsive to the following communication: an RCE filed on 10/24/06.

Claims 1, 5, 16-22, 26, 37-43, 46 and 49-56 are pending in the present application. Claims 2-4, 6-15, 23-25, 27-36, 44, 45 and 47-48 are canceled.
 Claims 49-56 are new.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5, 16-22, 26, 37-43, 46 and 49-56 are rejected under 35 U.S.C. 102(b) as being anticipated by Yuichi (JP Pub. No. 2000-259563) hereinafter Yuichi.

Regarding claim 1, Yuichi discloses a communication controller for controlling communication between an apparatus and a network (drawing 3), comprising: a data sending unit that sends, onto the network, data for enabling a browsing software to display a list of a plurality of languages so as to allow a user to select a language from among the plurality of languages to be used in a message to be sent (detail description, paragraph, 0011); a receiving unit that receives, from the network, languages data indicting a language selected by the user from the list (detail description, paragraph, 0011, language selection means 350); an obtaining unit that obtains information concerning that apparatus (detail description, paragraph, 0011, notice means 370

Art Unit: 2625

acquire the trouble ticket); a message creating unit that creates a message to be send, based on the information obtained by said obtaining unit, in the language indicated by the data received by said receiving unit (detail description, paragraph, 0011, failure creation means 330); and a sending unit that sends the message created by said message creating unit onto the network (detail description, paragraph, 0011, message system server means 300 send out message to help desk)

Regarding claim 5, Yuichi discloses the communication controller according to claim 1, wherein said data sending unit sends data for enabling the browser software to display a screen on which the user can select the language from the list and can enter a destination of the message, wherein said receiving unit receives destination data indicating the destination entered by the user, and wherein said sending unit sends the message created by said message creating unit to the destination indicated by the destination data received by said receiving unit (detail description, paragraphs, 0011-23 and 37, see figs. 4 and 5).

Regarding claim 16, Yuichi discloses the communication controller according to claim 1, further comprising: a controlling unit that determines a state of the apparatus based on information indicating the state of the apparatus (detail description, paragraph 13) and that controls a message sending process by said sending unit in accordance with the result of the determination (detail description, paragraph 28).

Regarding claim 17, Yuichi discloses the communication controller according to claim 1, wherein said message creating unit determines a state of the apparatus based on information indicating the state of the apparatus (detail description, paragraph 13)

Art Unit: 2625

and creates contents of the message in accordance with the result of the determination (detail description, paragraph 28).

Regarding claim 18, Yuichi discloses the communication controller according to claim 1, further comprising: a controlling unit that determines a state of the apparatus based on information indicating the state of the apparatus and that controls a message sending process by said sending unit in accordance with set values indicating conditions for sending a message and the result of the determination (detail description, paragraphs 33 and 39).

Regarding claim 19, Yuichi discloses the communication controller according to claim 1, wherein said message creating unit determines a state of the apparatus based on information indicating the state of the apparatus and creates contents of the message in accordance with set values indicating conditions for sending a message and the result of the determination (detail description, paragraph 33 and 41, user information (set value)).

Regarding claim 20, Yuichi discloses the communication controller according to claim 1, wherein said message creating unit inserts a sentence prepared in advance into the message based on the information obtained by said obtaining unit (detail description, paragraphs 40-41).

Regarding claim 21, Yuichi discloses the communication controller according to claim 1, wherein said controller is a network board mounted on the apparatus (fig. 5, inherent that network controller or any type of controller can be mounted as a piece of hardware in apparatus 300 in fig. 5).

Art Unit: 2625

Regarding claim 49, Yuichi discloses the communication controller according to claim 1, the communication controller according to claim 1, wherein the message is an e-mail message (detail description, paragraph 28).

Regarding claim 50, Yuichi discloses the communication controller according to claim 1, wherein the browsing software is a web browser and the data sent by said data sending unit is described in Hyper-Text Markup Language (detail description, paragraphs 15, 37 and 40, since the message is generated/created between the client and the server, it is implicit that HTTP is used since it is defined as a set of instructions made by a computer program that enables your computer to connect to an Internet document).

Regarding claim 51, Yuichi discloses the communication controller according to claim 5, further comprising: a storing unit that stores information indication a plurality of combinations of the language and the destination; and a language determining unit that determines the language to be used in the message to be sent based on the information stored by said storing unit, wherein said message creating unit creates the message in the language determined by said language determining unit (detail description, paragraphs, 27-37).

Regarding claim 52, Yuichi discloses the communication controller according to claim 51, wherein said data sending unit further sends data for enabling the browsing software to display the screen on which the user can enter a condition on which the message is to be sent, wherein said receiving unit receives condition data indicating a condition entered by the user, said storing unit further stores information indicating a

Art Unit: 2625

plurality of combinations of the language, the destination and the condition, and said language determining unit determines, as the language to be used in the message to be sent, a language corresponding to the condition which the condition information obtained by said obtaining unit satisfies (detail description, paragraphs, 27-37).

Regarding claims 22, 26, 37-43, 46 and 53-56, the claims recite limitations that are similar and in the same scope of invention as to those in claims 1, 5, 16-21 and 49-52 above and combination thereof; therefore, claims 22, 26, 37-43, 46 and 53-56 are rejected for the same rejection rationale/basis as described in claims 1, 5, 16-21 and 49-52.

Response to Arguments

Applicant's arguments, see pages 12-14, filed 10/24/06, with respect to the rejection(s)of claim(s) 1-48 under 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art references due to newly amended limitations as cited in claims 1, 22, 43 and 46.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew H. Lam whose telephone number is (571) 272-8569. The examiner can normally be reached on M-F (9:30-7:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kimberly A. Williams can be reached on (571) 272-7471. The fax phone
